### **GMP compliant products and services**

In addition to a complete list of **GMP compliant products and services**, the new section includes an informative ‘Guide to GMP,’ a GMP reference area, and a link to **AMSBIO** custom services which have GMP compliant options to suit your needs. **AMSBIO** also offers support for your change control procedures and quality risk management.

### **AMSBIO has**

developed robust quality control processes and trained staff to meet strict GMP regulations. To streamline the clinical translation process and ensure traceability, all required information including FDA-registered Drug Master Files are now available on request.

Achieving and maintaining ISO 9001 certification further reflects AMSBIO's dedication to quality management, underscoring their ability to meet and exceed international standards in the life science industry. With the AMSBIO Head Office in the UK certified since 2013 and successfully renewed every three years, the recent addition of the EU (Netherlands) office to the ISO 9001 certified family solidifies the company's determination to be a trusted partner in the scientific and manufacturing community.

**AMS Biotechnology (AMSBIO)**

Founded in 1987, AMS Biotechnology (AMSBIO) is recognized today as a leading transatlantic company contributing to the acceleration of discovery through the provision of cutting-edge life science technology, products, and services for R&D in the medical, nutrition, cosmetics, and energy industries. AMSBIO has in-depth expertise in extracellular matrices to provide elegant solutions for studying cell motility, migration, invasion, and proliferation. This expertise in cell culture and the ECM allows AMSBIO to partner with clients in tailoring cell systems to enhance organoid and spheroid screening outcomes using a variety of 3D culture systems, including organ-on-a-chip microfluidics. For drug discovery research, AMSBIO offers assays, recombinant proteins, and cell lines. Drawing upon a huge and comprehensive biorepository, AMSBIO is widely recognized as a leading provider of high-quality tissue specimens (including custom procurement) from both human and animal tissues. The company provides unique clinical grade products for stem cells and cell therapy applications. This includes GMP cryopreservation technology, and high-quality solutions for viral delivery.
