

Sterile 96-Well Plate Seal for Cell Culturing

RAPID Slit Seal

BioChromato Inc. has introduced a gamma sterilized version of its popular RAPID Slit Seal for scientists looking to eliminate solvent evaporation from samples when culturing cells in 96-well microplates.

Proven in labs worldwide,

RAPID Slit Seal is a proprietary self-closing microplate seal that returns to its original state even when punched with an HPLC or LC/MS autosampler. As a result, loss of volatile solvents from your valuable samples is eliminated.

In addition with RAPID Slit Seal insertion of pipette tips and sampling needles is easier and can be achieved without dragging saving you time and effort when dispensing or sampling.

Designed

to seal without using adhesive above microplate wells avoids the chance of sample contamination. In comparison to traditional sealing mats - RAPID Slit Seal also offers a way of reducing the cost of microplate sealing consumables.

For further information
