

Specialist Assay Kits and Microplates for Cancer Research

Porvair Sciences is a leading supplier of specialist assay kits and high-performance microplates for cancer and life science research.

Exhibited

at the recent American Association for Cancer Research (AACR) meeting - considerable interest was shown in Porvair's growing range of Chromatrap® ChIP kits for epigenetics research plus a new range of assay and cell culture microplates for high throughput screening and cell growth and proliferation respectively.

Chromatrap® kits

are well known for their easy, fast, and sensitive approach to immunocapture of antibody-chromatin complexes from a wide range of samples. Employing Chromatrap® bead-free Chromatin Immunoprecipitation (ChIP) technology, collaborators on the CEAT project** are developing new profiling approaches to identify and characterise epigenetic drugs that are effective in preventing cancer development in ovarian cancer models.

Porvair Sciences Ltd.

, together with JG Finneran and Porvair Kbiosystems are global manufacturers of consumables and instruments for life science and analytical workflows. From microplate technologies, glass vials, assay kits to automated laboratory equipment, the group is committed to equipping customers with high quality products for improved analysis and increased productivity to accelerate scientific discovery with integrity.

** For further information on the role of Chromatrap® products in the CEAT project please visit <https://www.chromatrap.com/news/2020/11/13/ovarian-cancer-project-shows-promise/>
